

Archer[®] Top-Down Risk Assessment

Use Case for Enterprise & Operational Risk Management

The Challenge

Risk professionals are continually challenged in managing scattered lists of risks and internal controls documented in different ways in various areas of the organization. Nonstandardized risk management terminology, inconsistent risk assessment methodology and inconsistent risk rating scales mean there is no comprehensive visibility to or accountability in addressing known risks. With everyone speaking differently about risk, inconsistent risk assessments can lead to bad risk management decisions, potential violations of regulatory mandates and an overall poor risk management culture.

Overview

Archer[®] Top-Down Risk Assessment enables practitioners to document risks and controls throughout the organization. Risks can be assessed on an inherent and residual basis, both qualitatively and across multiple risk categories using monetary values. Controls can be linked to the risks they treat for consideration as a part of a residual risk assessment. Risks and controls can be assigned to named individuals and organizational structure to establish appropriate accountability and to provide relevant reporting.

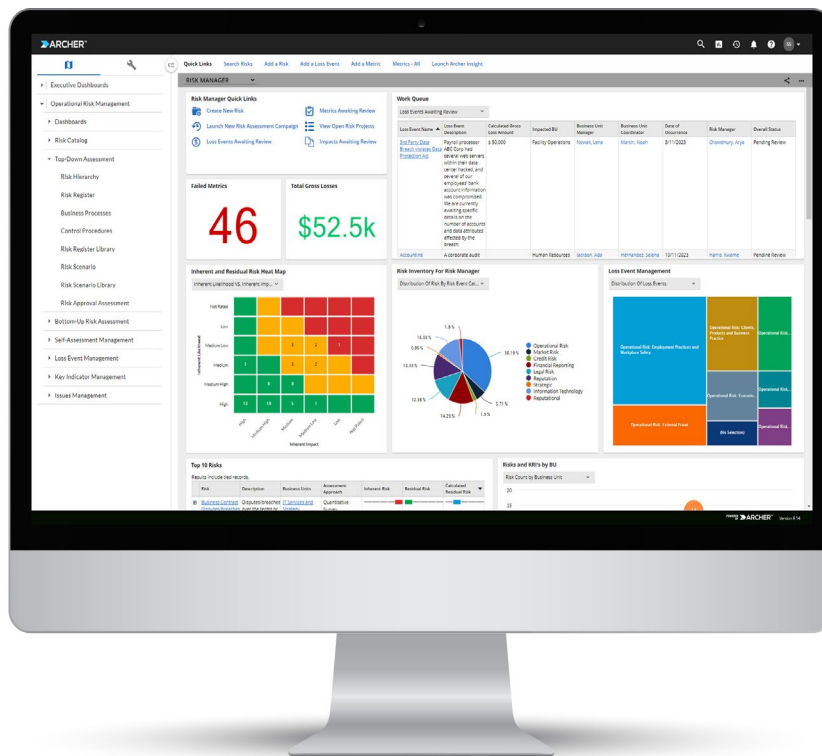

Features

- Catalog a consolidated view of risks and internal controls within the organization.
- Map risks to business processes, controls, higher-level risk statements and scenarios.
- Establish a library of agreed-upon scenarios and perform assessments on selected scenarios.
- Perform qualitative and monetary assessments of inherent and residual risk.
- Monitor risks against established tolerances and risk appetite.
- Enforce consistent terminology, risk assessment methodology and rating scales.
- Organized, managed process to escalate issues to ensure proper signoff/approval of issues.
- Operationalize accountability for risks, controls, business processes, scenarios, risk assessments and outstanding issues.
- Establish delegated authorities for approving risk and enforce those authorities by automatically routing risk decisions to the authorized individuals.
- Visibility into risk and control inventory and assessment progress via predefined reports and risk dashboards.

Benefits

With Archer Top-Down Risk Assessment, you can:

- Catalog a consolidated view of risks and internal controls within the organization.
- Map risks to business processes and controls.
- Understand the linkage between risk register statements and enterprise risk statements.
- Perform qualitative and monetary assessments of inherent and residual risk.
- Monitor risks against established tolerances and risk appetite.
- Manage risk scenarios on a consolidated basis, performing risk assessments and relating them to the risk register.
- Make certain that risk decisions are accepted only by those individuals with the authority to do so.
- Enforce consistent terminology, risk assessment methodology and rating scales.
- Ensure that all stakeholders are engaged in risk management commensurate with their scope of responsibility.
- Establish an organized, managed process to escalate, approve and remediate issues.
- Provide consistent risk and control reports from one consistent system of record.

About Archer

Archer is a leading provider of integrated risk management (IRM) solutions that enable customers to improve strategic decision-making and operational resilience with a modern technology platform that supports qualitative and quantitative analysis driven by both business and IT impacts.
