IT Security Risk Management

Managing risk across your IT infrastructure with Archer

It's a risky world...so what are you going to do about it?

As organizations increasingly rely on IT systems, data and infrastructure, the complexity and scale of IT and security risk multiplies. IT and security teams are already challenged with an increasing volume of security related data created by a myriad of systems and layers of defense. Further complicated by the crushing mountain of business data they must protect, security and IT teams struggle to have a clear understanding of which data, systems and processes are most important to the business, which risks to focus on, and resolving the gaps.

For IT risk and security functions to manage a complete picture of technology risk, teams must collaborate and coordinate efforts. Security policies and compliance efforts must be aligned to regulatory and business requirements. Threat and vulnerability management processes must be integrated and agile to stay ahead of growing threats. Security operations must be active and diligent to swiftly identify active attacks against the organization and protect assets at risk. **Today's IT risk and security strategy must focus on the immediate and tactical but also set sights on the future.**

With Archer, your risk management efforts can transform into a strategic advantage for your organization.

- **Proactive decision-making:** By organizing your processes to prioritize critical IT and business assets, identify and mitigate the most impactful risks, and mitigate issues, IT can focus on more strategic decisions.

- **Reduced costs:** Assessing IT risk across your organization can be resource intensive. Creating a repeatable, manageable process reduces the amount of effort required.

- **Agility within the organization:** Implementing IT security and risk best practices puts the organization in a position to take advantage of opportunities.

- **Improved performance:** IT security and risk management is essential to your organizational performance today and growth tomorrow.

> **IT Security Risk Management must be a sustainable, program that addresses the complexity of your IT risk and fits into a broader risk management strategy.**
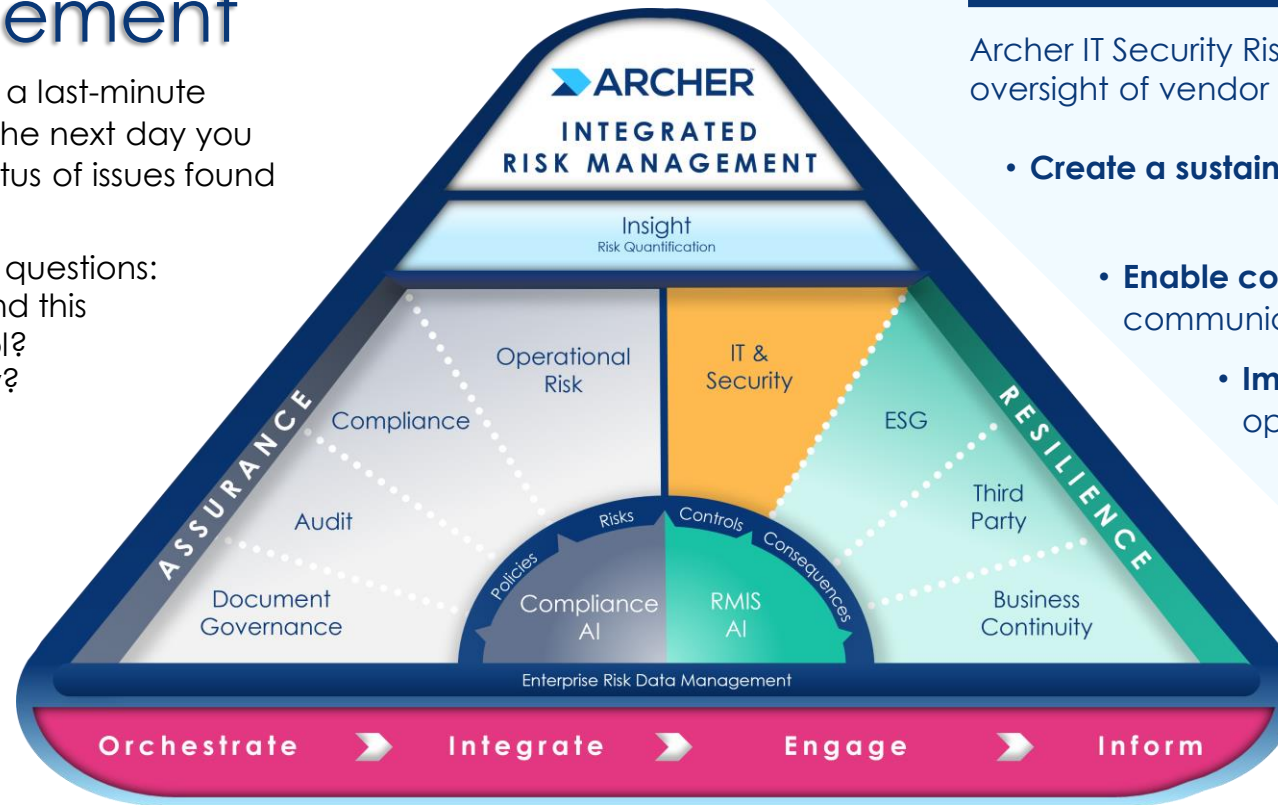

ARCHER

Purpose Built for IT Security Risk Management

One day you are building a last-minute report for management. The next day you are tracking down the status of issues found during the audit.

Then come the inevitable questions: Do we really need to spend this money on this new control? What is the highest priority? **This is why a platform designed for you, built on experience in risk management, is so important.**
