# Introducing Archer Insight

- Archer Insight's purpose-built quantification method is scalable and repeatable across any operational risk, including cyber risk

- With quantitative assessments, organizations can reduce losses and prioritize the most important and expensive risks

- Replace the traditional heat map with quantitative assessment and remove the subjectivity from risk assessments

- Enable coherent risk prioritization, cost benefit analysis, and aggregation at the enterprise and entity levels through risk quantification

- Transform your risk management program from a cost center to a value center by using risk information in decision making
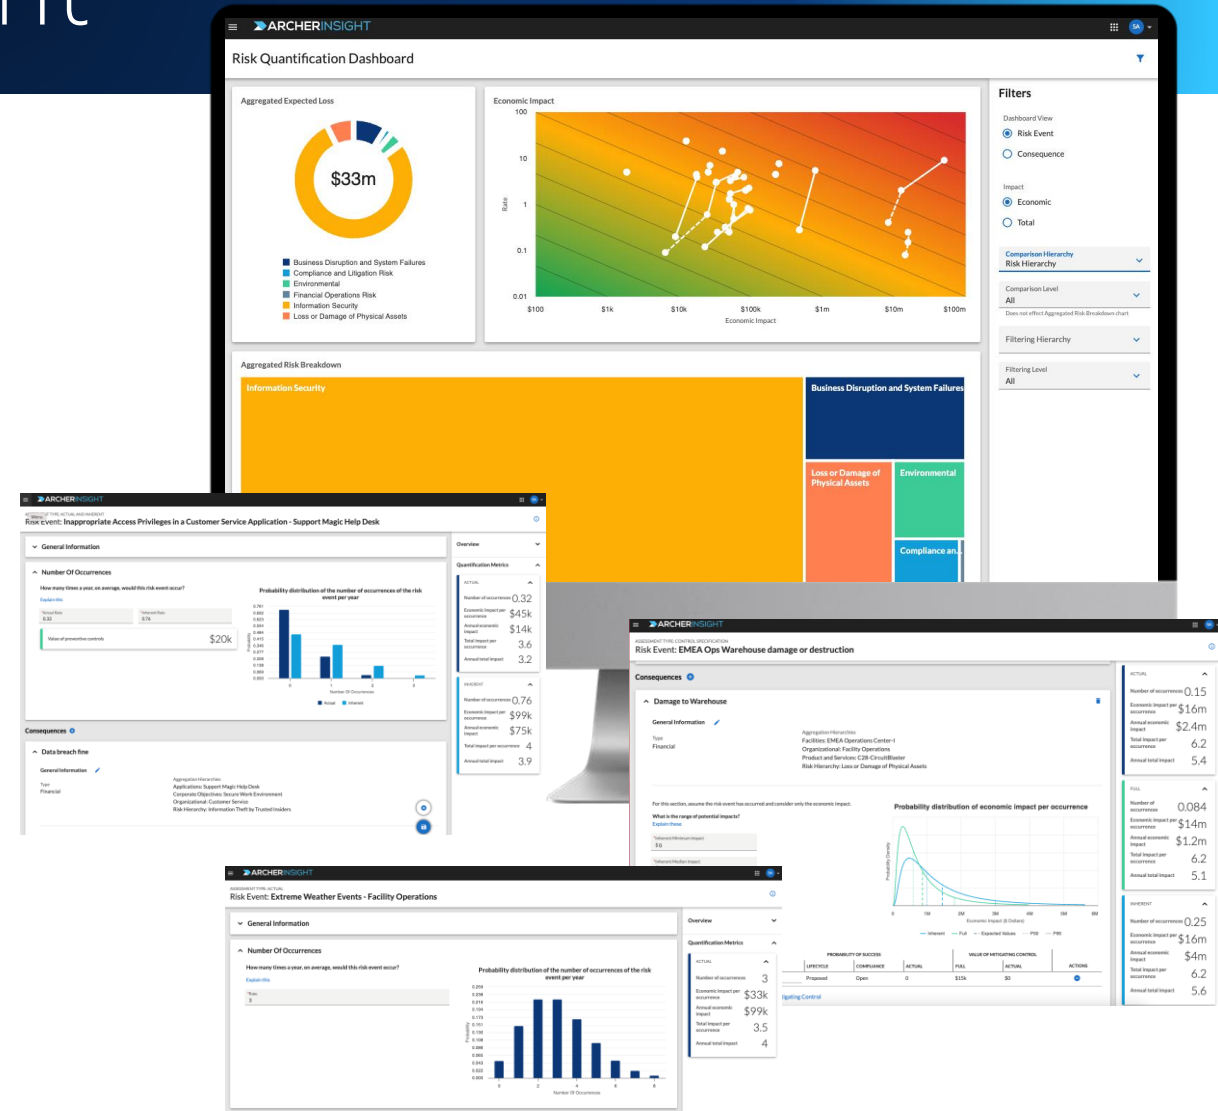

Archer Insight – Technical Brief

User Specifications

- Applicable for enterprise risk management programs, or domain specific risk management programs, (i.e. cyber)

- No advanced understanding of risk quantification required, builds on foundational risk management program

- Does not require large historical data sets, starts with risk program Risks, Risk Hierarchy, and definition of risk ownership

Technical Specifications

- Native GRC quantification using Archer technology

- Prerequisite use case: Top-Down Risk Assessment (or) IT Risk Management

- Enterprise licensing model
